My PC is quite old (i7-2700K V GTX 560 Ti) but after some changes in graphic options, I had a comfortable gaming experience. I liked how the story goes for now, I am trying to find more notes and solve a puzzle, hope to finish it soon. No jump scares as provided. Graphics quality looks satisfying and sound design is very good. You feel yourself all alone while playing.

If you like games with horror-adventure elements and with a mysterious story, you will like this one also.. Poorly designed game with terrible fps drops (I have a very high end PC). Cluttered textures with notes being place in extremely generic block houses that lack any logical sense. Barely any interaction with the creatures mentioned in the notes, what is funny is that you do see the creatures walking in the dark in preprogrammed sequence with no unpredictability.

It does have a nice menu but for the most part it's unfinished, unloved and deserves a medal for  
Darkness Ahead is a game with mysterious story, horror elements and adventure like mini-puzzles. Also graphics and sound design are decent. If you like Slender Man or Layers of Fear like walking simulator/horror/adventure games, i would highly recommend this game to you. And price tag is quite low, its another reason to check it out.. An enjoyable game I have played far worse I bought this game on a STEAM sale so I didnt pay much for it  
\$1.99 sounds about right it has a good horror atmosphere but it has no jump scares at all buy it if you like horror and want to add it to your collection.. Darkness Ahead is a game with a great story. You really wonder what's going to happen next and what happened before you. As you make progress, the game pulls you into itself more and more. My only complain about this game would be the time you have to spend on walking. But the question "What's going to happen next?" keeps you in the game nonetheless. And the optimization update made the game run much more smooth on my system.

Overall, I enjoyed it.
